

**RE
ENFORCER**

4X4

Designed to slip into a 'Hayman Reece' type tow bar on any vehicle

Height adjustable

A versatile low cost unit

Suitable for senior school through to club level

BENEFITS

The 4x4 is an alternative to our sled machines; effective, affordable and convenient.

This machine is a versatile low cost unit. Ideal for clubs with minimum storage facilities and for export as the modular system means it can break down into smaller cubic meters. Consequently, freight costs are reduced.

FEATURES

The Enforcer 4x4 is designed to slip into a 'Hayman Reece' type tow bar on any vehicle.

It relies on the motor vehicle's hand or foot pedal brake to provide resistance. The 4x4 is height adjustable so that it is compatible with different tow bar heights.

This machine weighs 80kg and its dimensions are 180cm wide x 75cm high.

All Enforcer machines are powder coated twice, once with anti-rust and the second coat is for the colour and durability. Machines can be painted in any colour upon request.
