

**ENFORCER**

## PRO SIMULATOR

**#1**

Our most popular scrum machine

Incredibly compact and can be easily transported or flat packed for export

Resistance to stall even the strongest of scrums

Used at all levels of rugby (junior through to professional)

### BENEFITS

The Pro Simulator is our most popular scrum machine and is used at all levels of rugby. It is the machine of choice for elite sides all around the world.

This machine replicates a live scrum more realistically than any other production machine and is suitable for all levels of rugby from junior through to professional.

The damage to the playing surface, using the twin spiked roller and mechanical brake system, is virtually non-existent.

Weighing 540kg and measuring 204cm wide x 237cm long x 95cm high, the Pro Simulator is incredibly compact and more versatile than any comparable machine on the market. It is easily transported or flat packed for export.

### FEATURES

The Enforcer Pro Simulator is the only sled type scrummaging machine on the market with a patented mechanical disc and twin roller brake system.

This unique brake system offers enough resistance to stall even the strongest of scrums.

The dual brake rolling system is at the rear of the machine so if the front row is not exerting energy in the right direction and scrummaging correctly, the machine will misbehave and the fault can be pinpointed.

The spring loaded canisters absorb the pressure and shock whilst at the same time measuring engagement and constant pressure.

The hydraulic raising and lowering transport wheel system makes it easy to manoeuvre the machine on and off the field during training and because 

### SPECIFICATIONS

Weight  
**540kg**

Width  
**204cm**

Length  
**234cm**

Height  
**95cm**

➔ of this greater flexibility, it enables both forwards and backs to train together at different positions on the field.

The Pro Simulator model machine has a total weight of 540kg and is capable of offering up to 2500kg/24,517n of resistance. Its total dimensions are 204cm wide x 237cm long x 95cm high.

A standard feature on all current Pro Simulator machines is the new binding pads which were designed in consultation with Andrew Blades (former Wallabies' scrum coach) and Laurie Fisher (former Brumbies' scrum coach).

All Enforcer machines are powder coated twice, once with anti-rust and the second coat is for the tone and durability. Machines can be painted in any colour upon request.

The Pro Simulator has numerous safety features which include;

- **Upgraded Headrest**  
The adjustable width and increased pad depth reduces the likelihood of neck and shoulder injury.
- **Open pad design**  
This allows the front row to pull out of the engagement situation if they feel they are not packing correctly.
- **Protective metal cover**  
This is encased over the entire rear spiked brake roller system.
- **Scrum coach's seat**  
During scrummaging sessions the coach is securely positioned within the machine.

#### Options

1. Width adjustable spring loaded headrest and manual pressure measuring gauges.
2. Width adjustable headrest with pressure measuring digital read out.
3. Width adjustable non compression headrest.
